Recycling Advocates Oppose “One Bin for All”

Houston Needs Source-Separated Recycling, Composting, a Long-Term Strategy and Community Participation

In order to protect natural resources, the climate, create jobs and beautify our great city, Houston needs to implement a long term Zero Waste Plan similar to those that have passed in Austin, Dallas and in San Antonio, as well as many cities around the world. However, the “One Bin for All” proposal would promote a lack of responsibility in our communities for the waste we produce, while at the same time utilizing technologies that have proven to fail, pollute and create long-term risks.

“One Bin for All” technologies threaten air quality, recycling and community health:

- “Mixed waste processing” ruins recyclable materials, especially paper, cardboard and metals
- “Trash-to-fuel” technologies like gasification, pyrolysis or catalytic conversion produce high levels of air pollution and destroy materials that could be reused or recycled
- Facility would likely be located at or near an existing landfill or transfer station, nearly all of which are near low income areas or communities of color, threatening environmental justice
- Organic food scraps that have been mixed with trash and hazardous waste cannot produce valuable compost
- Long-term contracts (15-35 years) prevent the City from innovating in waste reduction or recycling, threatening new and existing jobs
- Significant cost (up to five times more than landfilling costs) and financial risk (no proven track record), even if privately financed
- Loss of important environmental education behavior in the home, as well as incentive to reduce consumption and waste
- Facilities that the City points to as recent examples of success are not reporting how their trash is being diverted from the landfill
- This proposal does not address the vast majority of trash in Houston. The City only collects 10% of our trash. What about apartments and businesses?

Groups and individuals who have contacted Mayor Parker and City Council Opposing “One Bin for All”:

- National Recycling Coalition
- NAACP Houston Branch
- Texas Environmental Justice Advocacy Services (T.E.J.A.S.)
- Teamsters Joint Council No. 58
- Dr. Robert Bullard, Ph.D., Dean of the Barbara Jordan- Mickey Leland School of Public Affairs at Texas Southern University
- Sierra Club Houston Regional Group
- Michael Brune, CEO, Sierra Club
- Institute of Scrap Recycling Industries, Inc.
- Paper Recycling Coalition
- Steel Recycling Institute
- Houston Peace and Justice Center
- San Jacinto River Coalition
- Annie Leonard, Story of Stuff Project
- Public Citizen TX
- Sustainable Energy and Economic Development (SEED) Coalition
- Hip Hop Caucus
- 5Gyres
- Richard Anthony, Zero Waste International Alliance
- Eco-Cycle International
- Product Policy Institute
- Global Alliance for Incinerator Alternatives
- Energy Justice Network
- Los Angeles Alliance for a New Economy (LAANE)
- Center for a Competitive Waste Industry
- Central Texas Zero Waste Alliance
- Grassroots Recycling Network
Zero Waste Houston Coalition Proposes Real Solutions

- We thank the Mayor and City Council for voting to expand the two-bin recycling program and look forward to all single-family homes having the opportunity to recycle by early 2015!
- City of Houston should abandon the One Bin for All proposal.
- City of Houston should appoint a Resource Recovery Board with real neighborhood, environmental and environmental justice representation to help craft a long term waste reduction, recycling and composting plan for Houston.
- We need to have more transparency and community involvement throughout waste and recycling proposals. The City refuses to disclose what they spent the $1 million grant from Bloomberg Philanthropies on, for example.
- We need a recycling plan for apartments and businesses. Other cities in Texas have passed Universal Recycling Ordinances, and Houston needs to do the same to prevent thousands of tons of trash from entering landfills every year.
- We need a pilot program for curbside composting to eliminate organic waste from landfills.
- We can ban wasteful products that cause property harms and cost millions of taxpayer dollars in clean-up.
- We can encourage producers to be more responsible for the waste they create from packaging and difficult-to-recycle products such as batteries and light bulbs. Several cities have passed “producer responsibility” resolutions to support producer responsibility policies at the state level.

What can YOU do?

- Let our elected officials know where you stand on “One Bin for All,” and support a long-term Zero Waste Plan for Houston!
- Reduce, Reuse, Recycle/Compost. Use your big, green bin and encourage your neighbors to do the same!

Defining Zero Waste: A goal that is ethical, economical, efficient and visionary, to guide people in changing their lifestyles and practices to emulate sustainable life cycles, where all discarded materials are designed to become resources for others to use.
